31/01/23.

Software Testing.

Done.

Platform - hardware:

→ Java.

. Architecture Independent. *byte code.*

variable,
operator,
statement

collision
loop.

→ we do inheritance to reuse functionality.

Polymorphism:

```
Shape s = new Rect();  
s.draw();  
s = new circle();  
s.draw();
```

→ If else can be replaced with polymorphism.
→ Java said no multiple inheritance due to
Diamond problem.

→ Java introduces interfaces. *when you cannot make this.*
→ B is type of A. we define interfaces instead of
that.

→ Polymorphism can be achieved through
Polymorphism.

→ Layered Application:

mysql

Now I want to change mysql to nosql now I have to change just one layer.

→ coupling can be reduced by removing concrete classes with interfaces.

→ If we have to separate two layers then we use interfaces instead of placing whole objects to other.

→ Interfaces are used to define contracts.

→ Collection: Database returns results object and it is ~~the~~ stored in collection to make it more generic. Suppose if we replace files with database then it will still work.

→ Exception:

```

try {
    // code actual
} catch ( ) { if exception this
} catch ( ) { if this
} finally {
    lazmi part
  
```

10

assert

~~assertion~~ These are used in code for pre and post condition.

→ Use assertion for error handling.

→ JRE 8.

→ JUNIT 5.

→ Eclipse.

07/02/23.

→ dependency inversion

→ Now that will use interface and not concrete object.

→ Now IDAL will be used in PersonBO.

Pehle PersonBO → PersonDAO.
concrete

Now PersonBO depends
→ IDAL.

↑ implements.

PersonBO now depends on PersonDAO abstraction.

→ classes should depend on abstraction and not on concrete classes.

→ Advantages: Low coupling, dependency ~~inversion~~ injection.

→ If you have done, you can introduce stubs.

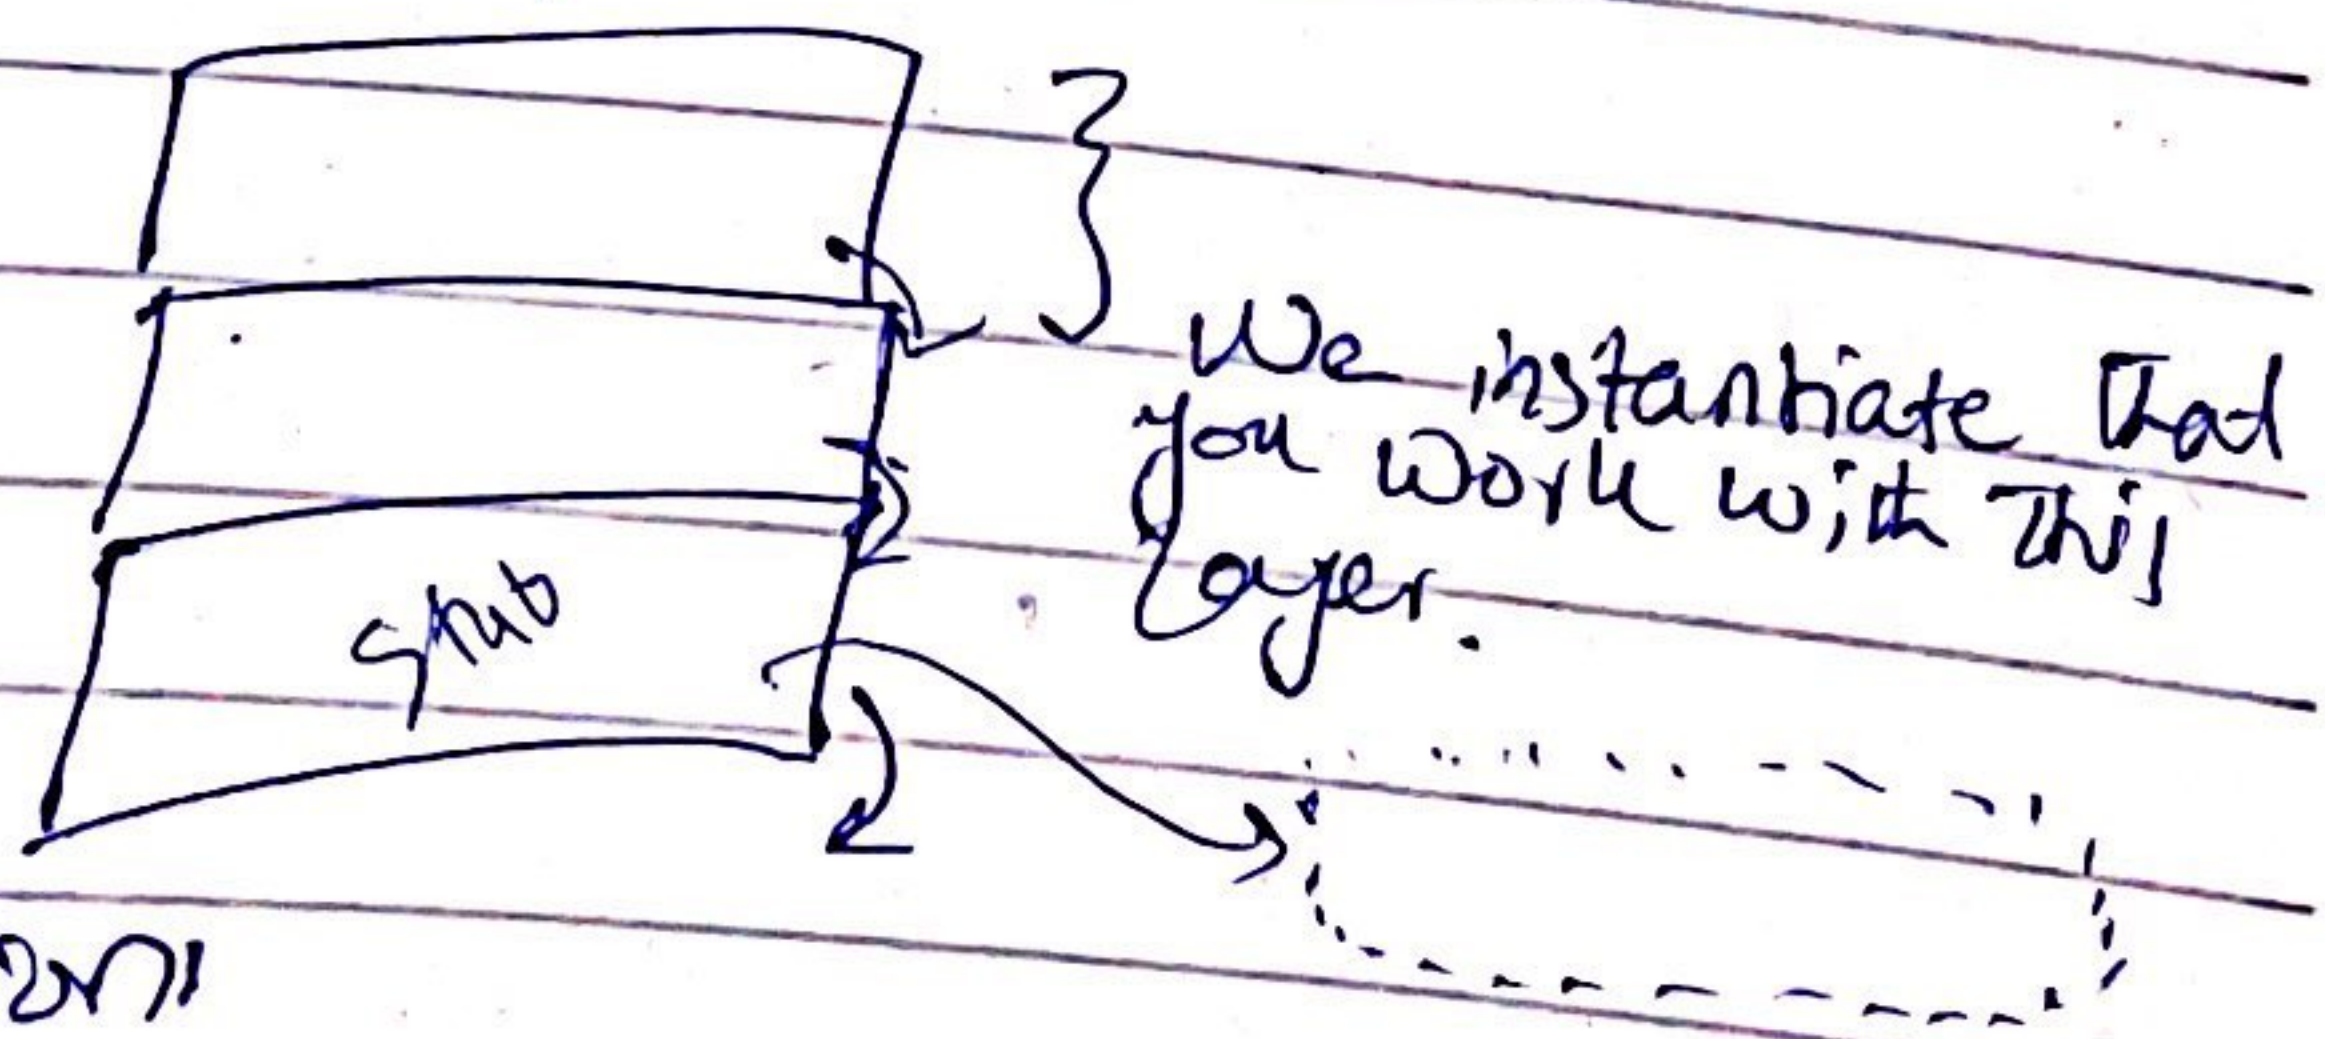

→ It will help in stubbing.

→ Now we do not have to create class objects. We can have test cases for IDAL.

→ Interface
→ Also connect dal to pl.
Reference Interface Types.

09/02/23.

→ Dependency Injection

→ Regression testing: Run all past test cases because some may fail due to new.

→ We will use stub and not exact implementation for testing.

Amish

Advantages of stubs.

→ Stub use ~~hota hai~~ Krin Kile noshta error DAL ma ho.

→ Second DAL is not in access.

Bar Bar Query Krni prtin ha,
May DAL testing Kor or Kr sha ho.

→
